2. OBJECTIVES:

The main objective of this project is to develop Operations and Maintenance (O&M) models for multi-source parks (wind-wave; wind-solar; H2); to study the benefits of an integrated planning while prescribing the best maintenance strategies for each configuration. The final endeavour of this work is to perform a sensitivity analysis of the uncertainty sources (weather conditions, asset reliability, maintenance quality) in the O&M performance using the developed models to understand and project the expected OPEX of large-scale parks. Given the inherited complexity of these stochastic settings state-of-the-art solution techniques hybridizing optimization and simulation will be used.

3. BRIEF PRESENTATION OF THE WORK PROGRAMME AND TRAINING:

The working plan includes the following activities:

- to complete courses, aligned with the project's area;
- to study Operations and Maintenance (O&M) models
- to develop and customize optimization and simulation models
- enhance the project's reach and results, participating in its dissemination and collaborating in future proposals;
- collaborate in the project management, namely writing reports and deliverables to the European Commission.
